

Printing from Kubuntu 18

Version: 1.0

When printing from Kubuntu 18 each print job will need to be authenticated by the user after it is sent to the printer.

1. Print to printer “Student”.
2. Open “system-config-printer” from start menu of a command console (ie, konsol or yakuake).
3. Download the Conda installer by running the command.
4. Right click on “Student” printer and select “View Print Queue.”
5. In the print queue under “Status” right click “Held for authentication”, and select “Authenticate”.
6. Install conda with the command.
7. Enter password.
8. Swipe your student card at any Ricoh printer to print document.
